TRS–DSAI INTERNATIONAL WORKSHOP ON INTELLIGENT SYSTEMS

The Future of Robotics and AI

Thapar University | 30 October 2026

Speaker Details

Name	Muralikrishnan E
Designation	Head – Edutech Future Mobility Labs
Organization	Edutech India Pvt. Ltd.
Mobile	+91 95000 78513

Short Biosketch

Muralikrishnan E is the Head – Edutech Future Mobility Labs, Edutech India Pvt. Ltd., where he leads initiatives in autonomous mobility, ADAS, electric vehicles, software-defined vehicles and intelligent robotic systems. His areas of interest include autonomous ground and aerial platforms, sensor fusion, perception, localization, path planning, control, ROS 2/Autoware and Physical AI. He works closely with academic institutions, research organisations and industry in developing future-mobility laboratories, research platforms, training programmes and application-oriented technology projects. He holds an M.S. in Telecommunications Engineering from Victoria University, Melbourne, and a B.E. in Electronics and Communication Engineering from the University of Madras.

Talk Title

From Wheels to Wings: How AI Is Redefining Autonomous Robotics

Abstract

Autonomous robotics is rapidly moving beyond isolated machines toward intelligent systems that can perceive, decide, navigate and act in real-world environments.

This talk explores the common intelligence stack behind both autonomous ground vehicles and aerial robotic systems. It examines how AI, computer vision, LiDAR, sensor fusion, localization, path planning and control come together to enable safe and adaptive autonomy.

Using ground and aerial mobility as complementary examples, the session highlights how the same robotics principles can be applied across different platforms, operating conditions and research challenges. It also discusses the transition from simulation to physical autonomous systems, the role of edge AI and real-time decision-making, and the opportunities for research in robotics, AI, multi-agent systems and Physical AI.

"How do we move from robots that execute commands to autonomous systems that understand, decide and act?"
